

IN THE CLAIMS:

Please amend claims 1, 6, and 9. All pending claims are reproduced below.

1 1. (Currently Amended) A computer-readable medium to direct a portable computing
 2 device to function in a specified manner, the computer-readable medium comprising:
 3 a first set of instructions to receive broadcast information including a data
 4 repository and formatting information and to store the received data repository in the
 5 portable computing device;

6 a second set of instructions to facilitate creation of a search query;

7 a third set of instructions to retrieve a search result from said stored data repository
 8 based upon said search query; and

9 a fourth set of instructions to direct said portable computing device to transform
 10 said search result in accordance with said formatting information to produce formatted
 11 content.

1 2. (Original) The computer-readable medium of claim 1, further comprising:

2 a fifth set of instructions to download said broadcast information to said portable
 3 computing device from a wireless source.

1 3. (Original) The computer-readable medium of claim 1, wherein said second set of
 2 instructions includes:

3 a sixth set of instructions to generate said search query based upon a user input.

1 4. (Original) The computer-readable medium of claim 1, wherein said broadcast
 2 information further includes a plurality of search queries, and wherein said second set of
 3 instructions includes:

4 a seventh set of instructions to select said search query from said plurality of search
 5 queries based upon a user input.

1 5. (Original) The computer-readable medium of claim 1, further comprising: an

2 eighth set of instructions to display said formatted content.

1 6. (Currently Amended) A computer-readable medium to direct a portable computing
2 device to function in a specified manner, the computer-readable medium comprising:

3 a remote application server internal to the portable computing device and
4 configured to process information received from a wireless source and stored in the
5 portable computing device, wherein said information includes a logic portion, a data
6 repository, and formatting information, and wherein said remote application server
7 includes:

8 a query generator module configured to produce a search query in accordance with
9 a user input and in accordance with said logic portion;

10 a data repository manager module configured to search said data repository in
11 accordance with said search query to retrieve a search result; and

12 a content generator module ~~internal to said portable computing device and~~
13 configured to generate content in accordance with said search result and in accordance with
14 said formatting information.

1 7. (Original) The computer-readable medium of claim 6, wherein said remote
2 application server further includes:

3 a display module configured to display said content.

1 8. (Original) The computer-readable medium of claim 6, further comprising:
2 a decoder configured to download said information from said wireless source.

1 9. (Currently Amended) A method of operating a portable computing device, the
2 method comprising:

3 receiving broadcast information including a data repository and formatting
4 information;

5 storing the received data repository in the portable computing device;

6 facilitating creation of a search query;

7 retrieving a search result from said stored data repository based upon said search
8 query; and

9 transforming said search result by said portable computing device in accordance
10 with said formatting information to produce formatted content.

1 10. (Original) The method of claim 9, further comprising:
2 downloading said broadcast information to said portable computing device from a
3 wireless source.

1 11. (Original) The method of claim 9, wherein facilitating said creation of said search
2 query includes:
3 generating said search query based upon a user input.

1 12. (Original) The method of claim 9, wherein said broadcast information further
2 includes a plurality of search queries, and wherein facilitating said creation of said search
3 query includes:
4 selecting said search query from said plurality of search queries based upon a user
5 input.

1 13. (Original) The method of claim 9, further comprising: displaying said formatted
2 content.
